

ProClean Multi Multi Cleaner

Multi-purpose surface cleaner

Description

ProClean Multi is a highly concentrated water-based cleaner used for the removal of hydraulic oil, mechanical grease, fuel residues, and carbon deposits in engine rooms, decks, bilge tanks, ultrasonic tanks, settling tanks, cabins, and compartments. It is also suitable for cleaning machinery, components, hand tools, and vehicle tyres such as those of cars, trucks, and forklifts. In addition, it can be applied to remove stubborn stains from carpets, sofas, curtains, and furniture in living quarters. ProClean Multi is a non-corrosive product that can be safely used on all surfaces and in all spaces, and it is also effective in hydrocarbon cleaning processes in tanks.

Directions For Use/Applications & Dosage Rates General Cleaning

ProClean Multi can be used either concentrated or diluted.

General Surface cleaning: Prepare a 1–2% ProClean Multi solution in water, apply it to the surface, leave for 3–5 minutes, then wipe off. Heating the solution enhances cleaning performance.

Tank cleaning: For use as a tank cleaner, circulate, soak, or spray the tank with a 0.1–1% solution using a water jet. This method is particularly effective for cleaning tanks previously carrying heavy fuel oil, diesel oil (light fuel), gasoline, and other oils. ProClean Multi is effective against all types of oil, dirt, and soot, including fuel oil residues. It may also be used for cleaning hydrocarbons when required, following the same dilution ratios recommended for tank cleaning.

The product is highly suitable for indoor environments as it does not produce unpleasant odours. Thoroughly cleaning surfaces also prevents the development of bad odours.

Heavy dirt and oily surfaces: For heavily soiled or oily areas, apply ProClean Multi directly in its concentrated form. Leave on the surface for 5–10 minutes, then clean using a brush.

Tank & Cargo Hold Cleaners

Summary

- It can be used safely on all metals and metal alloys. It has no known effect on plastics and rubbers.
- ProClean Multi is a water-based, non-toxic product, does not harm the paint.
- Non-flammable, can be used with other products
- It is economical and concentrated, so only a small amount is needed.
- It can be mixed with both fresh water and seawater, and it also produces foam when combined with either.

A) Organic Properties

Physical State (20°C): Liquid
Color : Yellow
Odor : Soft

B) Physical Properties

pH (concentrated) : 12.5–13.5
Molecular Weight : -
Explosion Limit : No
Flash Point : -
Density : 1.10–1.20 g/cm³ (20°C)
Solubility : It mixes with water in all proportions.

Storage Conditions

Packaging Type : 25–30–200 liters sealed, plastic drum or barrel
Storage Period : 3 years

Approvals & Certificates

Product No : SP-KS-046
