

ProClean Wash ER-CLEAN DEGREASER

Multi-purpose surface and tank cleaner

Description

ProClean Wash is a high-performance, water-based alkaline cleaning agent. It is a low-toxic product that does not contain nonyl phenols or caustic alkalis. It consists of biodegradable components that are safe for oil cleaning and metal degreasing. ProClean Wash can be used as a cleaning agent for engine rooms, decks, cargo holds, and even as a tank cleaner. Efficiently removes heavy grease, sludge, oil, fish oil, animal and vegetable oils. When used in high concentrations, it can attack aluminium and zinc.

Directions For Use/Applications & Dosage Rates General Cleaning

ProClean Wash can be applied as a concentrate or diluted with water. The amount to be used is proportional to the degree of contamination, the current downtime (fault), the surface area to be covered, and the desired degree of cleanliness. For heavy cleaning and degreasing, the ProClean Wash can be used undiluted, while for small amount of contamination, it can also be used diluted with water, depending on the degree and nature of the contamination.

Direct Injection Method: Prepare a 3-6% solution by diluting ProClean Wash with water. When the prescribed solution is prepared, inject it directly into the contaminated area and then rinse thoroughly with water.

Recirculation Method: ProClean Wash should be diluted with water to prepare a 5-10% solution. After the solution is prepared, apply it by circulating for about 6-8 hours, and then wash it off thoroughly with water. In case of heavy contamination (pollution), you may need to repeat the procedure.

Soaking/Immersion Method: Once the solution is prepared, immerse the part or component to be cleaned and leave it for about 30 minutes, making sure that all surfaces remain covered with the solution. Then rinse thoroughly with water.

Tank & Cargo Hold Cleaners

Summary

- It is a multi-purpose, water-based cleaner.
- ProClean Wash is completely biodegradable with low-toxic properties.
- Not flammable.
- ProClean Wash does not contain hydrocarbons and chlorinated solvents.
- It has no known effect on rubber.
- Considering the dilution ratio, it is a very economical product.
- It provides numerous applications, such as cleaning and degreasing in the marine industry.

A) Organic Properties

Physical State (20°C): Liquid
Color : Light Yellow
Odor : Ethereal scented

B) Physical Properties

pH : 10.0-12.0
Molecular Weight : -
Flash Point : -
Density : 1.00-1.10 g/cm³
Solubility : Completely soluble in water.

Storage Conditions

Storage : It should be stored at room temperatures.
Packaging Type : 25-30-200 liters original plastic drums
Storage Period : 3 years

Approvals & Certificates

Product No : SP-KS-378
