

ProHold Limewash

LIME-WASH

Coating Chemicals

Cargo Holds

Description

ProHold Limewash is an advanced, premium version of traditional limewash coatings, specially formulated with slaked lime and active adhesion-enhancing agents. Designed to bond strongly to surfaces while allowing them to breathe, it delivers superior durability and protection. This high-performance limewash plays a key role in disinfecting cargo holds and acts as a protective barrier against contamination from incoming cargo. Its exceptional adhesion and breathable nature make it an ideal solution for maintaining clean, safe, and corrosion-resistant hold surfaces.

Directions For Use/Applications & Dosage Rates

ProHold Limewash is supplied ready to use and should not be diluted. Therefore, it can be applied directly from the container. Apply the product onto the cargo hold surfaces using a low-pressure pump or a *chemical applicator set**. Application with a brush or roller will result in higher product consumption. Do not begin loading until the product is completely dry.

Cleaning Procedure

After cargo discharge, the product can be removed from the hold surface using acid-based chemicals such as ProHold Lime or ProHold Cement.

Follow the instructions provided in the technical data sheets of the specified cleaning products.

Summary

- Completely biodegradable
- High disinfectant
- Forms a protective layer on surfaces
- Low cost
- Easy to use

A) Organic Properties

Physical State (20°C): Liquid
Color : Colorless, white
Odor : Specific

B) Physical Properties

pH : 12,0-13,0
Molecular Weight :-
Flash Point :-
Density : 1.15-1.30 g/cm³
Solubility : It gives a milky white color in water.

Storage Conditions

Store at ambient temperatures.
Keep away from acids.
Keep away from food.

Approvals & Certificates

Product No : SP-KS-052
